**MEMORANDUM**

**SUBJECT:** Contract Laboratory Program Data Review

**FROM:** *Raymond Flores*  
Raymond Flores, Alternate ESAT Regional Project Officer  
Environmental Services Branch (6MD-HL)

**TO:** Katrina Coltrain, Remedial Project Manager (6SF-RL)

**Site:** WILCOX OIL

**Case#:** 45671

**SDG#:** F6R05

The EPA Region 6 Environmental Services Branch ESAT data review team has completed a review of the submitted Contract Laboratory Program (CLP) data package for the referenced site. Due to matrix issues, some samples for VOA and SVOA analysis were analyzed at diluted levels only. In the VOA fraction, two target results were rejected in sample F6R05 and six target results were rejected in sample F6R09 due to poor surrogate performance. The samples analyzed and reviewed are detailed in the attached Regional data review report.

The data package is acceptable for regional use. Problems, if any, are listed in the report narrative. If you have any questions regarding the data review report, please contact me at (281) 983-2139.

 NA = Not applicable.

**ACTION ITEMS:** The re-extraction of SVOA sample F6R06 and SVOA-SIM samples F6R05 and F6R06 exceeded the contractual holding time limit. The laboratory did not reanalyze and/or re-extract the SVOA and SVOA-SIM samples associated with method blanks that had outlying DMC recoveries. The laboratory failed to reanalyze LMVOA samples F6R12 and F6R23 for unacceptable DMC performance. The laboratory failed to reanalyze SVOA-SIM samples F6R05 and F6R06 for unacceptable IS performance.

**AREA OF CONCERN:** LMVOA Vinyl chloride and chloroethane failed the technical %D calibration criteria. Seven samples had poor DMC performance, rendering some results unusable. SVOA The re-extraction of sample F6R06 exceeded the technical holding time limit. Some results were inconsistent between the multiple analyses of three samples. SVOA-SIM The re-extraction of samples F6R05 and F6R06 exceeded the technical holding time limit. The 4,6-dinitro-2-methylphenol failed the technical %D calibration criteria. Six naphthalene and three 2-methylnaphthalene QIs were raised above the SQLs because of laboratory contamination. Two samples had poor IS performance. Some results were inconsistent between the multiple analyses of two samples.

COMMENTS/CLARIFICATIONS  
REGION 6 CLP QA REVIEW

CASE 45671 SDG F6R05 SITE Wilcox Oil LAB EQI

**COMMENTS:** This SDG consisted of 17 soil samples for LMVOA, SVOA, and/or SVOA-SIM analyses following CLP SOW SOM02.3. Samples F6R19, F6R20, F6R21, and F6R23 only required LMVOA analysis. The samples were also subject to Modified Analysis Request 2544.1 (MA 2544.1), which required the laboratory to analyze the samples for 19 additional compounds and lower CRQLs for the SVOA-SIM analyses. MS/MSD analyses were not requested for this case.

The SOW requires that the soil sample results be adjusted for moisture content as well as dilution when applicable. The adjusted CRQLs, higher than the CRQLs specified in the SOW and MA 2544.1, were reported by the laboratory and are referred to as SQLs in this report.

The target compounds of concern with the required CRQLs are listed on pages 61 and 62 of this report. Although both the full scan and SIM analysis results were available for all SVOA samples, the SIM analysis results are designated for use only when the corresponding full scan analysis results were non-detects or below the SQLs. Many of the target compounds of concern were reported at concentrations above the SQLs in 10 samples.

Because of high matrix background, the laboratory analyzed 10 LMVOA samples at the medium level (5 gm) with an additional 10X dilution for samples F6R05, F6R06, F6R09 - F6R11, F6R13, F6R16, and F6R23 and analyzed 10 SVOA and all SVOA-SIM samples at up to 20X dilution. The laboratory also re-extracted and reanalyzed SVOA sample F6R06 and SVOA-SIM samples F6R05, F6R06, and F6R16 at medium level (1 gm) with dilution (up to 20X) because of high target compound concentrations.

**LMVOA** The results associated with VDMC11 for sample F6R05 and VDMC13 for sample F6R09 were unusable because these two DMCs were not detected in the respective samples.

**S3VEM** Review was performed for this package as requested by the Region. For this review option, laboratory contractual compliance and technical usability of the sample results are primarily determined by the EDM CCS Defect Report and NFG Data Review Results Report, respectively. The reviewer performs supplemental hardcopy forms checking and applies Region 6 guidelines, where necessary, to account for known limitations of the electronic review process. Therefore, the reviewer's final assessments may deviate from those found in the EDM reports. The NFG Data Review Results Report for the SDG is attached to this report as an addendum for additional information.

**OVERALL ASSESSMENT:** Some results were qualified for 11 LMVOA, 3 SVOA, and 13 SVOA-SIM samples because of problems with holding time, calibration, laboratory contamination, DMC performance, IS performance, and quantitation. ESAT's final data qualifiers in the DST indicate the technical usability of all reported sample results. An Evidence Audit was conducted for the CSF, and the audit results were reported on the Evidence Inventory Checklist.

The laboratory was contacted for some CSF and reporting issues (see Resubmission Request). The laboratory response is not expected to impact the DST, so the DST included in this report is the final version.

<b>Date:</b> 11/09/2015	<b>MA:</b> 2544.1	<b>Title:</b> SVOA SIM Analysis with Additional Analytes and at Lower CRQLs
-------------------------	-------------------	---

**Method Source:** SOM02.3    **Method:** Semivolatiles by SIM

**Matrix:** Soil and Water

**Summary of Modification**

The purpose of this modified analysis is to analyze soil and water samples using Selective Ion Monitoring (SIM) for the complete target analyte list (TAL) specified for SVOA SIM in Exhibit C with additional SVOA SIM target analytes at the specified CRQLs in Section I. The Laboratory shall proceed to the SVOA SIM analysis for any sample analyzed by the full scan analysis with any of the analytes in Section I that is either not detected or detected at concentration below the adjusted CRQL in the full scan analysis (reported with either "U" or "J" Lab Qualifier). Unless specified by this modification, all analyses, Quality Control (QC), and reporting requirements specified in the SOW listed in your current EPA agreement remain unchanged and in full force and effect.
